Color Stability

When selecting colors, always review them under the actual lighting the product will receive in use.

Be careful when matching new product to existing product of the same color. Existing installations can change color if product is closely exposed to fluorescent lighting or intense sunlight. If a perfect color match is required for add-on product, forward a sample of the installed product. The samples in this color selector are provided as a color guideline. Color, texture, and gloss representation may be different between the various paint batches.

In addition to the color selector, metal color samples are available for specific color matching and sales presentations. Please contact your Aurora representative for metal samples.

Eco-Friendly Gloss-Tek

Environmentally friendly Gloss-Tek™ powder coat is 100 percent non-emissive; free of formaldehyde, methanol, and other solvents; and completely friendly to artifacts, specimens, and documents. Gloss-Tek provides a non-glare fingerprint resistant surface.

No wonder we say that with Aurora, any color you choose is "green."
